

Innovation through experience

# Chip & PIN Solutions for Hospitality and Retailing

\*Model: MPT510 (portable / wifi)

**Geller Chip & PIN terminals integrate with even low cost Geller cash registers. So, if all you need is a simple cash register at the point of sale, you can still offer your customers the facility to pay by Chip & PIN.**

- Integrates with Geller ECRs and Geller PC EPOS terminals
- Choose a fixed model for retailing points of sale or a portable unit for payment at the table in restaurants
- If you upgrade or change your Geller point of sale terminal at any time, you can still retain the Chip & PIN unit

# Geller Integrated Chip & PIN Terminals

## Model MPT-500/510 (Portable GPRS/WIFI)

For locations with broadband, Model MPT-510 connects via a standard wifi link to your broadband. Where there is no broadband, but there is good mobile telephone reception, integrated Model MPT-500 works via the mobile GPRS network. In both cases, the cradle is hard-wired to the point of sale unit and the payment terminal is 'portable', i.e. removable from the cradle. The transaction is automatically completed when the payment terminal is returned to the cradle.

These models are especially suitable where the payment terminal is taken to the customer – for example at a restaurant table.

## Model MPT-540 (fixed)

This integrated model remains in a fixed position and the payment terminal itself is hard-wired to the ECR or PC EPOS unit.

The MPT-540 also connects directly to your broadband so payment processing times are extremely fast and reliable.

The MPT-540 is the perfect choice for busy retailing locations where the customer enters his PIN and payment is made at the point of sale.

Stand is an optional extra

## Geller ECR and POS Terminals

The Geller SX-690, ML-790 and all Geller PC-EPOS terminals running GellerTouch software are Chip & PIN compatible.
